

The "Rainbow of Digital Citizenship"

Andrea Trentini (andrea.trentini@unimi.it)

Dipartimento di Informatica dell'Università degli Studi di Milano

Our society is shaped by information and communication technologies, a continuous reciprocal influence between what happens in the real world and what happens online. This context inevitably extends the citizenship concept which becomes digital, where rights and obligations are properly declined to meet technology opportunities or to face technology misuse. These opportunities, however, challenge the very idea of citizenship and the exercise of underlying rights. The author (with former colleagues) proposed a layered formalization called "The Rainbow of Digital Citizenship rights" [De Cindio et al., 2012] to slice all aspects of digital citizenship in conceptual levels. The framework describes an abstraction of layers spanning from basic network access up to the highest "right to active involvement in policy-making," i.e., from low to high:

0) **The network**, the infrastructure is relativistic (two observers cannot "see" the same network state no matter what) and traces are often persistent (no privacy), these anti-features should be well known and somewhat corrected;

1) **Services** should be openly standardized, data should be ethically managed, service contracts should be transparent and fair, security and availability should be fulfilled, FOSS software should be used instead of proprietary;

2) **Access**, any citizen should be able to access a set of basic digital services (i.e., mail, storage, computation, etc.) in an equalitarian way;

3) **Education** should be a leverageable right of any (digital) citizen, thus knowledge should be accessible through open licenses and institutional/national education programs should include "digital citizenship" topics;

4) **Transparency**, data should be openly accessible, with very few exceptions, to all citizens that must be able to know factual information about government decisions (pre and post);

5) **Participation** models the right and the duty to create data and to contribute to a digital citizenship community;

6) **Consultation** defines the right to be consulted, institutions should ask digital citizens for comments about decisions that have to be taken, judgment about a topic should be backed by documents;

7) **Democracy** is the final and highest level of digital citizenship, it is reached when digital citizens can vote on topics and decisions instead of delegating representatives every few years.

The Digital Citizenship Rainbow goals:

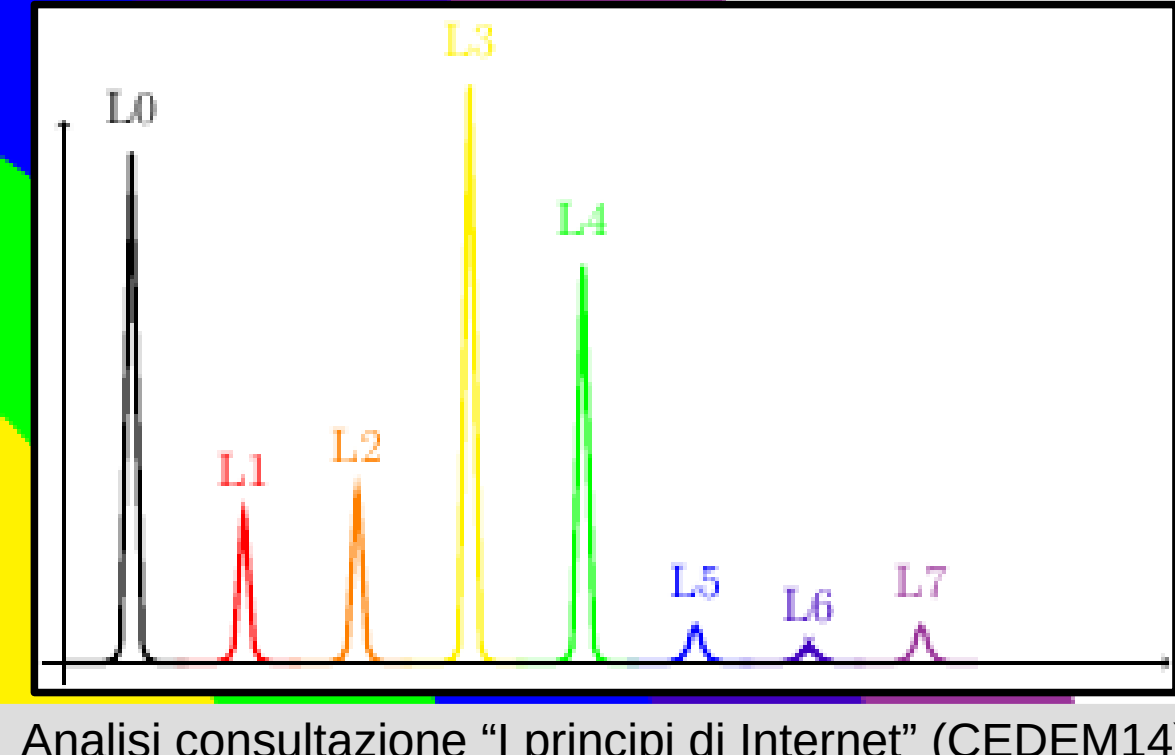

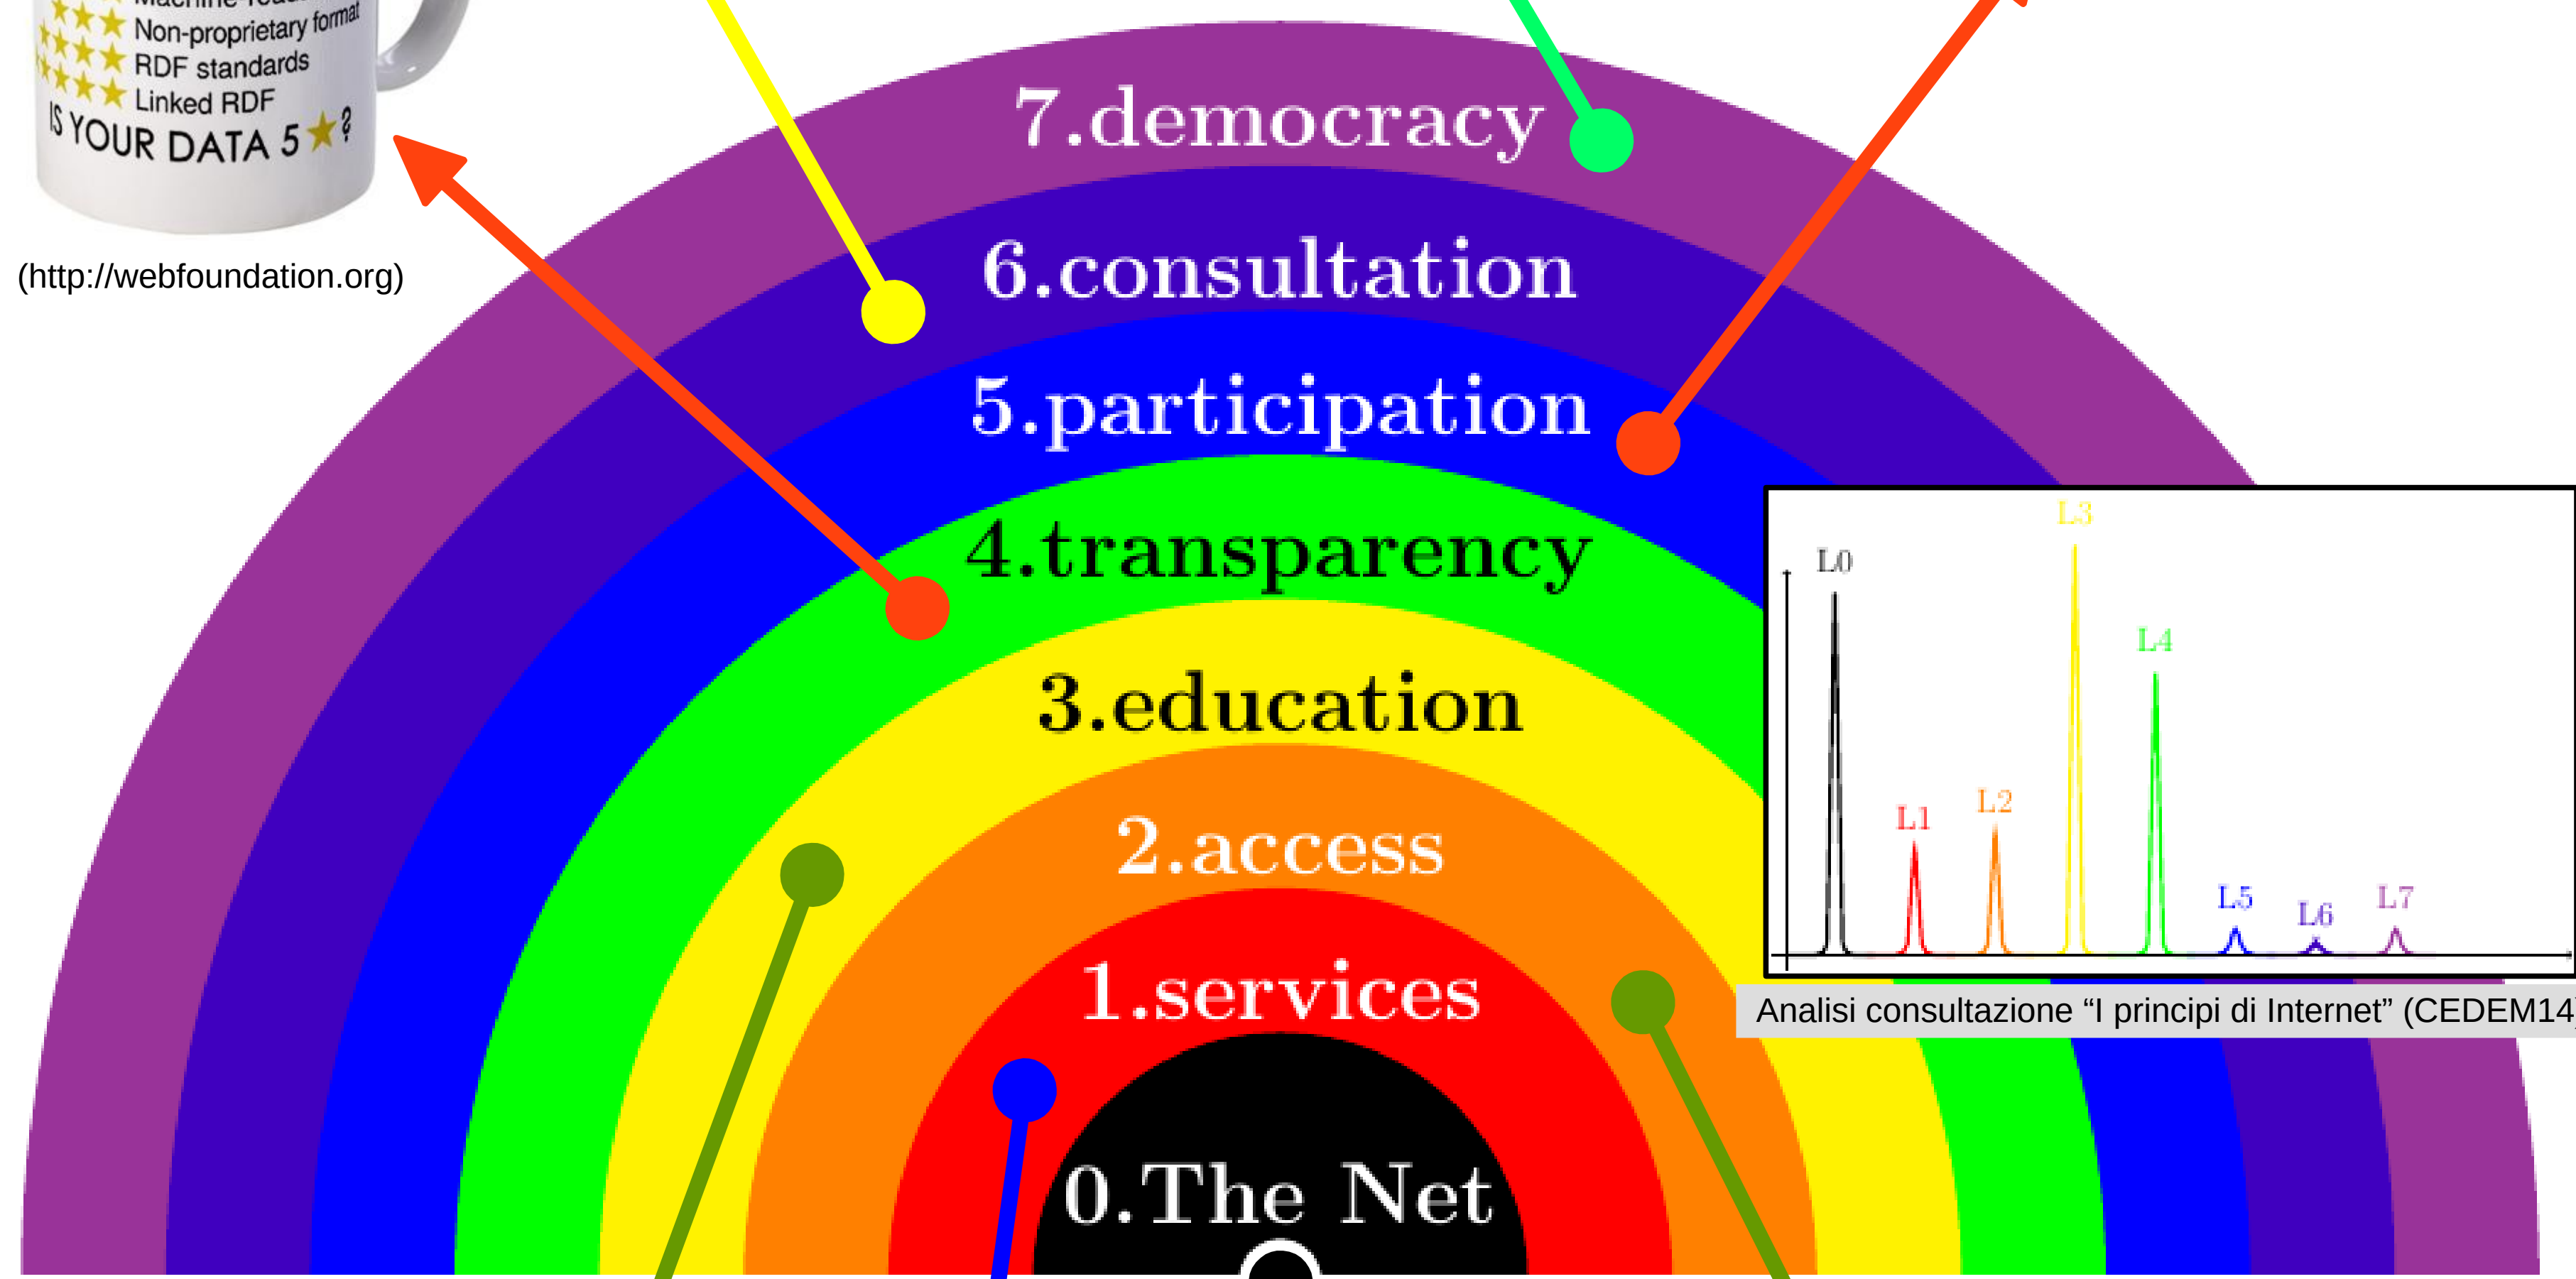

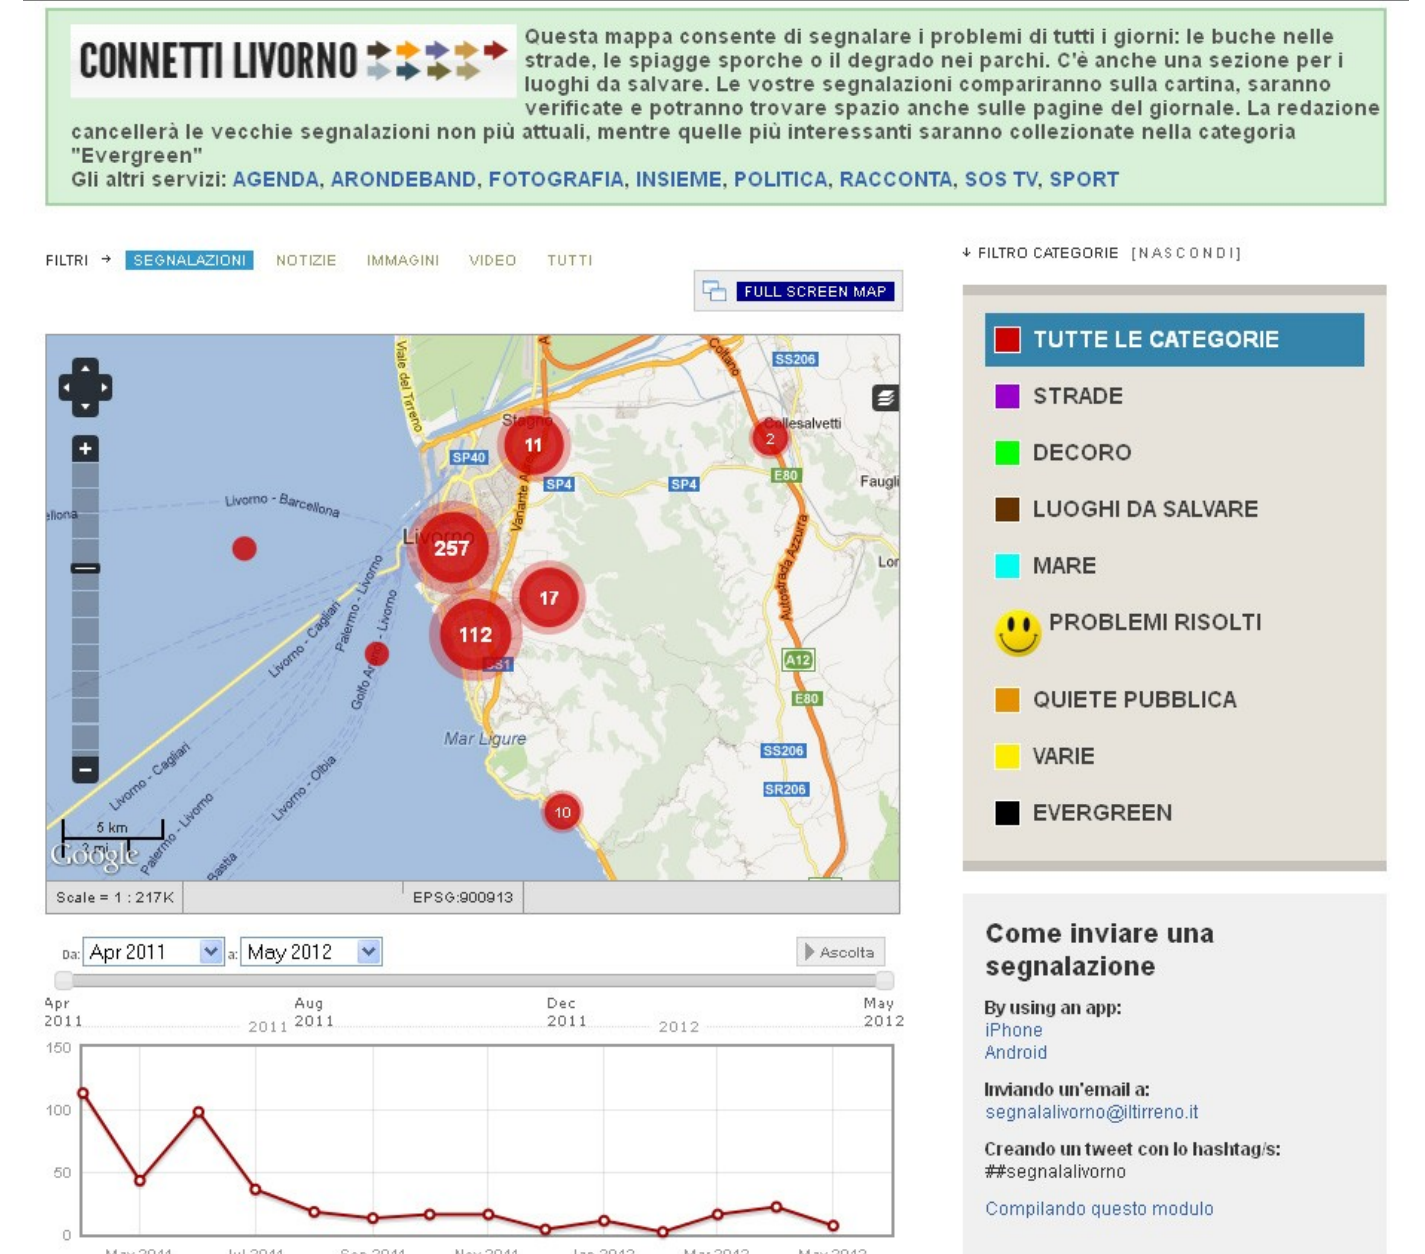

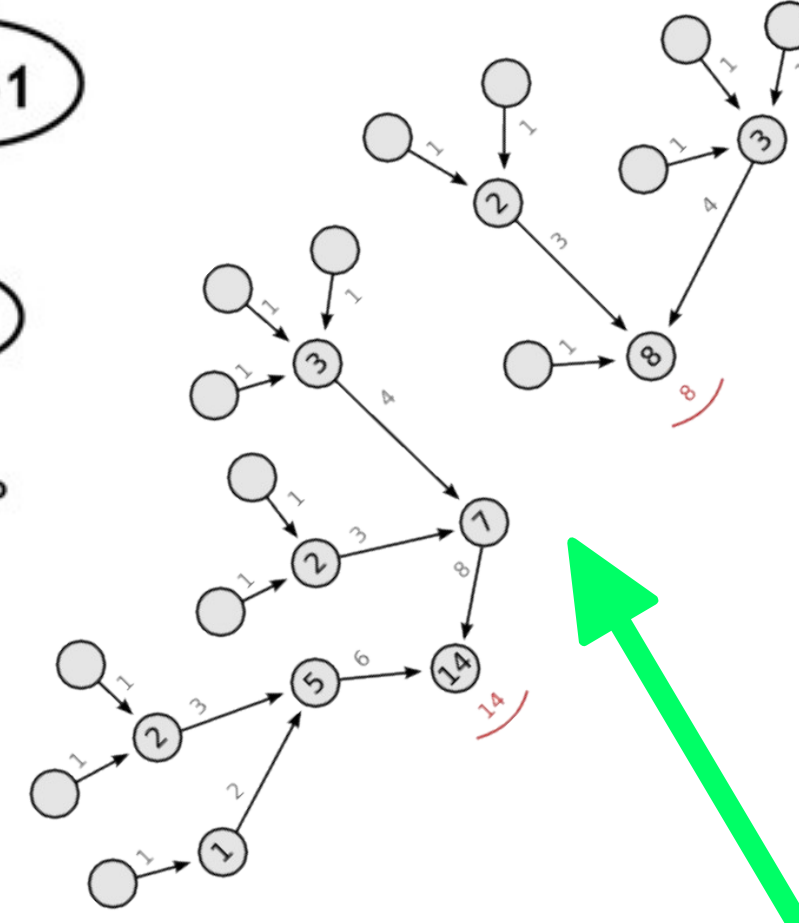

- the capability to analyze situations and contexts where technology is involved in some citizenship process by generating a **spectroscopy-like** diagram of the process under study;
- the availability of a simple and **fairly understandable logical model** to be used when describing a digital citizenship context/process/system in a non technical environment such as when speaking to politicians (decision makers) and citizens (stakeholders);

The framework has been in use and revision during the years, it has been used as a didactic tool throughout the many instances of the Digital Citizenship and Technocivism course at the University of Milano and it has also been tested during design and negotiation of many participatory processes in the region of Lombardy. The model performed very well in both contexts, the two main weaknesses emerged were:

- the sometimes blurred (i.e., not always easy to sketch) boundaries between 5th, 6th and 7th levels;
- the order of the lower levels, changed from access-services-education to the current services-access-education.

End User License Agreement
Licenza d'uso

- Aprire il tappo equivale all'accettazione della presente licenza d'uso
- L'utente della presente bottiglia (di seguito denominato "bevitore") è tenuto a rispettare i termini della presente licenza, in caso di inadempienza il bevitore verrà perseguito a norma di legge
- La bottiglia NON può venir rivenduta, prestata o ceduta a qualsivoglia titolo a chicchessia
- Il bevitore NON può offrire l'acqua (o parte di essa) contenuta a chicchessia
- Il bevitore NON può modificare il contenuto della bottiglia aggiungendo altre sostanze

Acqua PROPRIETÀ
(altre proposte: privetta, privissima)

Contenuto: acqua del rubinetto

- Il bevitore NON può riempire nuovamente la bottiglia una volta terminata
- Ogni volta che il bevitore desidera bere da questa bottiglia deve telefonare al call center di cendo quanto ha intenzione di bere e attendere autorizzazione
- Il bevitore deve conservare questa bottiglia per almeno 5 anni dal suo uso per eventuali controlli di liceità
- Il bevitore NON può utilizzare la bottiglia vuota per usi diversi da quello stabilito qui
